# MORE ORIGINAL FEATURES. MORE REASONS TO TRUST LAYHER.

At Layher, we are not only innovators – we are genuine pioneers  
Long history of forward-thinking design  
Consistently enhancing installation possibilities  
Commitment to user responses and feedback

Layher history of organic growth ensures consistent quality control  
Commitment to growth from within  
All divisions developed to reflect 'The Layher Way'  
Growth by innovation – not acquisition

Speed of safe erection and dismantling means rapid access and protection solutions – no need for double guard rails  
Proven and tested loading capability and 'automatic correct assembly' design  
Materials and construction mean long life performance  
Full input and support from Layher's UK and worldwide network

Wide choice meets exact needs  
Comprehensive stockholding means rapid order response  
System versatility optimises on-site usage  
Continuous innovation creates more possibilities

Safety-conscious design – from in-built fixings to anti-tipping components  
Wide choice of dedicated training options  
Full industry accreditation  
Linking safe procedures with optimised system performance

Rosette connector maximises versatility  
Multiple fixing angles possible  
Accommodates curves and radii to follow building profile  
Proven – from architectural curves to industrial pipework

Lightweight design simplifies handling  
Cost benefits through maximum transport and storage capability  
Interlocking decking – just one example of advanced thinking  
Helps optimise site space usage and vehicle movements

Wide choice of bay widths available  
Simple split-bay installations  
Optimised component usage  
Every installation gains from design versatility

# Service

## It's in our DNA

Layher is the world No.1 for proven performance, advanced systems and efficiency in use. But to us, that's only half the story . . . check out our comprehensive service package -

- In-house technical services
- In-house CISRS-approved training centre
- In-house financial support solutions
- On-site product support services
- Unmatched stock support with fast, off-the-shelf availability
- Depot network, nationwide
- Original product innovation
- Quality engineered products
- Original permanent advanced guardrail option
- Strategic customer partnership

More Possibilities. The Scaffolding System.

The past, present and future of system scaffolding

# ACCESSING ALL HOUSEBUILDING

The housebuilding sector represents an excellent example of where the benefits of Layher scaffolding, protection and access systems can be seen.

Crucially, the Layher designs also lend themselves to the most up-to-date and exciting developments in the housebuilding industry. “From timber frame to block construction – the ability of our scaffold systems to keep pace with build programmes is often vital,” adds Sean Pike. “The added benefit of weather protection from our choice of temporary roofing systems enhances these advantages further still.”

“Our customers in the field acknowledge factors such as in-built safety, versatility and speed of erection while other key gains arising from the need for fewer components, reduced storage and transport requirements and minimised cross-bracing are widely noted.”

Sean Pike, Layher’s UK Managing Director

# NEW HD BEAM TAKES OFF

The new Layher heavy duty, lightweight aluminium beam is already bringing key gains to contractors across a range of projects.

Compatible with both Allround system and tube and fit scaffolds, a choice of beam lengths combines with a wide range of accessories and fittings to produce tailored, optimised installations.

Early examples of its use include the refurbishment of the old Yell building in Reading into student accommodation for Crown Student Living. Archway Services – the first to use the HD beam in this country – installed it both as a support to the scaffold structure above but also, vitally, as a means of maintaining full access to the on-site car park during the 11 month refurbishment programme.

The rail industry has also been quick to gain with a major London station seeing multi-discipline contractor KAEFER Ltd. use the span to minimise the number of support towers for a working platform above a busy pedestrian area. The project, for main contractor BAM Nuttall, also included an extensive Keder temporary roofing system.

## HD Beam – Key Facts

- 1.25 metres depth between top and bottom chords.
- Top and bottom chords have 60 mm OD, 48.3 OD for upright and diagonal chords.
- Maximum moment of 150 kNm at top chord restraint with shear of 53.8 kN.
- Choice of beam lengths – 1.036 to 5.18 metres.
- Accessories and fitting options include 6° and 30° apex sections together with corner, T and cross beam connectors.

# IRISH SUCCESS CONTINUES

Layher Ireland continues to develop its presence in the country with successful agreements in both the contracting and hire sectors to report.

“Cumiskey Scaffolding has been a long term user of the Layher system and has endorsed the advantages that its customers will now enjoy with the support of the new Layher facility in County Meath,” says Sean Pike, Layher’s UK Managing Director. “Operating in the building and maintenance sectors, the advantages of our system designs can be clearly seen – particularly in terms

of safety, versatility and speed, resulting in reduced labour, transportation and maintenance costs.”

One of the country’s best established contractors, Cork Scaffolding, also adds its voice –

“With such an emphasis today on safety, quality of materials and design, the Layher modular systems offer a confidence and versatility that no other scaffolding system can provide,” says Declan Cummins, Director of Cork Scaffolding. “We have been constantly watching the market for

ways to improve our standards and the standard of the scaffolding industry in Ireland and strongly believe that this is the product to do it.”

John Carolan and his team at Layher Ireland are also happy to be working in the hire sector through the involvement of Boston Access. Based in Naas, County Kildare, the organisation is to act as hire distributor of Layher Allround and Staircase systems for its growing number of customers across Ireland – all fully supported by product training programmes.

# GROWING NETWORK MARKS CONTINUING SUCCESS

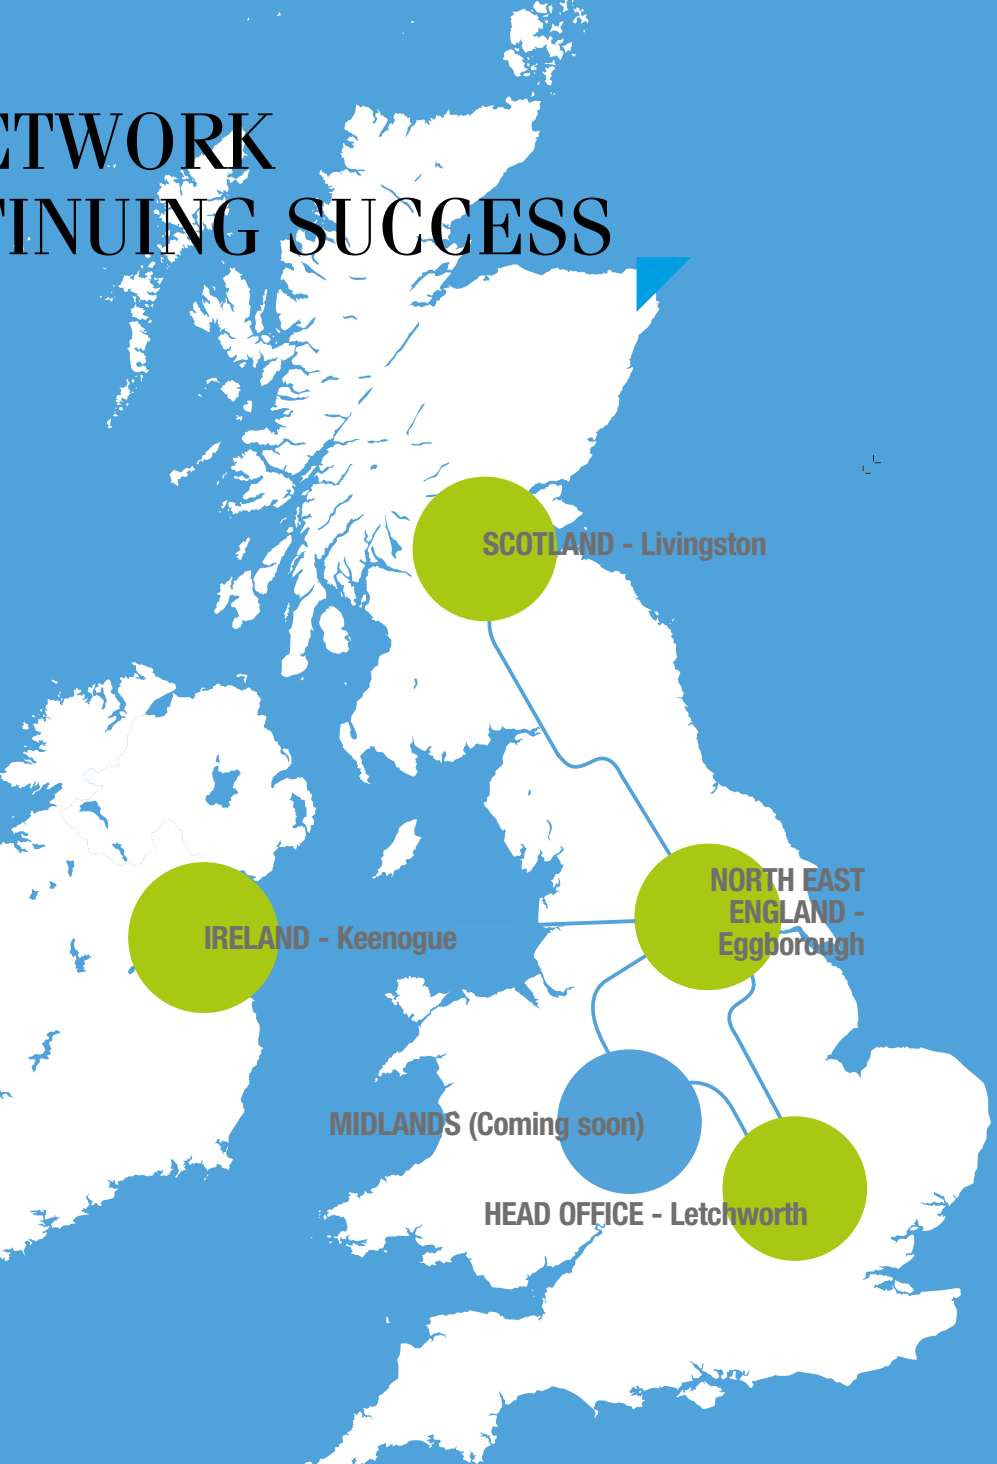

Clear benefits in terms of on-site efficiency, safety and project scheduling and a continuous commitment to innovation are the building blocks of Layher's success in this country and which have led directly to the growth of the network.

"Our well-established headquarters and distribution operation in Letchworth, and highly active facility in Livingston in Scotland, have recently been joined by our Eggborough depot, which services the north of the country and, most recently, the opening of Layher Ireland in County Meath," says Sean Pike, Layher's UK Managing Director.

"We are committed to working as closely as possible with our customers and that means having equipment and training capability on hand wherever possible," he continues. "Adding this to our rapid response service and full support of our head office and manufacturing plant in Germany means we can bring the full range of Layher benefits directly to our customers."

Ongoing staff development builds further on this growth pattern, reflecting the Layher belief in investing now for the future.

"Our strength throughout the country is soon to be enhanced even more," concludes Sean Pike, "with the Midlands to be the next to gain from a dedicated Layher facility. As they say, 'Watch This Space!'"
